VOICE 2008 Program Offers More than 60 Technical Presentations on the Latest SoC and Memory Test Techniques

Registration Open for Verigy's Third Annual Conference for V93000 and V5000 Users and Partners

CUPERTINO, Calif.--(Business Wire)-- Verigy (NASDAQ:VRGY), a premier semiconductor test company, announced details of the technical program for VOICE 2008, Verigy's third annual conference for its V93000 and V5000 users and partners to be held September 23 and 24, in San Jose, Calif. at the Dolce Hayes Mansion. The technical program will include more than 60 technical presentations on the latest SoC and memory testing techniques, methodologies and best practices from some of the leading global semiconductor and memory device manufacturers, as well as Verigy representatives. This year, organizers selected the VOICE program's presentations from 136 abstracts submitted. As a result, participants will be able to hear from presenters from 12 countries representing more than 20 leading industry companies.

"The volume and quality of VOICE paper submissions reached a new peak this year, which made the technical program committee's job even more challenging," said Debbona Ahlgren, vice president and chief marketing officer, Verigy. "As a result, this year's program is more robust than ever. We are looking forward to gathering with our global customers and partners in Silicon Valley in September."

The VOICE 2008 program will offer six tracks to provide information on the full range of test topics of interest for Verigy customers: Testing Techniques and Methodologies; Productivity Software and Tools; Communications and RF; Processors and Converters; High-Speed Digital Interfaces; and Memory Test. The full VOICE 2008 conference agenda and technical program are now available at www.verigy.com/go/VOICE2008.

Registration for VOICE 2008 is available online and early registration is \$250 for attendees registering before August 22. After that date, the cost to register online will be \$300, or \$350 at the door. In addition to the Web site, more information on VOICE 2008 is available by contacting organizers at +1-866-ATE-TEST or +1 952-946-7010 or via email at verigy@performark.com.

About VOICE

VOICE is the annual conference for the large and growing international community of Verigy V93000 SOC and Verigy V5000 Series users and partners. It offers a unique opportunity to make users' semiconductor testing operations as effective as possible. One can gain and share valuable insights, build long-lasting relationships and learn what's new about Verigy products and applications.

VOICE is managed by a steering committee of representatives from Verigy and its customers. This year's steering committee members represent the following companies: Analog Devices Inc., Broadcom Corp., Cisco, DA-Test, Intel Corporation, Nano Integrated Solutions Inc. (NANO ISI), NVIDIA Corporation, Qualcomm Inc. and Verigy.

About Verigy

Verigy designs, develops, manufactures, sells and services advanced semiconductor test systems and solutions for the flash memory, high-speed memory and system-on-chip (SoC) markets. Verigy's scalable platforms are used by leading companies worldwide in design validation, characterization, and high-volume manufacturing test. Advanced analysis tools accelerate design debug and yield ramp processes for Verigy's customers. Information about Verigy can be found at www.verigy.com.
